May 21st to May 27

To UMB Fdt-Ctr for Celiacs

To donate on line:

www.twincitiesceliacwalk.org.

Try one of our new GFO Items and help us fight Celiac!!

What is Celiac Disease?

Celiac disease is an autoimmune disorder. When those with it eat gluten – a protein found in wheat, barley, rye, and their derivatives – it sets off a reaction that causes damage to the small intestine. This can result in malnutrition and many other conditions, some life threatening.

The UMB Center for Celiac Research is working to support celiac research, educate patients, the medical community and the general public.
